BRIEF BIO

Software engineer specializing in backend and internal platform engineering. I design, build, and deploy production services in Go and Python, with a focus on service architecture, API gateways, infrastructure, CI/CD, and agentic development workflows. My systems and AI background spans operating systems, compilers, distributed and networked systems, computer vision, deep learning, and machine learning.

WORK EXPERIENCE

Software Engineer

Apr. 2024 – Present

Mitac Information Systems Corp

Newark, California

- Own multiple services from architecture through deployment, using agentic coding workflows (Codex, Claude Code, Copilot, MCP, and reusable agent skills) for codebase analysis, debugging, and feature delivery.
- Initiated and continuously improved agent rules/regulations across multiple projects to stabilize agent behavior.
- Built RESTful data and reporting APIs in Python/FastAPI and a shared database access service in Go/Gin, automating multi-database lifecycle, connection pooling, and thread-safe transactions.
- Designed a reverse-proxy service architecture plus a Go authentication/API gateway with JWT-based RBAC, providing controlled access to internal and external endpoints.
- Led the migration of 2 production codebases from TFS to GitLab and established CI/CD pipelines with Docker Compose, creating reproducible, declarative, version-controlled production deployments.
- Re-engineered a Xamarin mobile application in Flutter for warehouse logistics management and deployed it to 100+ handheld devices across multiple warehouse sites.
- Maintained 2 out of 3 mission-critical internal systems using C#/.NET, ASP.NET, DevExpress, and Oracle PL/SQL.

Deep Learning Research Assistant

Oct. 2019 – Jun. 2022

UESTC Center for Future Media

Chengdu, China

- Proposed an AI model for multi-source unsupervised domain adaptation under partial label spaces, and designed feature-selection and alignment objectives to reduce cross-domain distribution gaps.
- Implemented the full loop of data preprocessing, data augmentation, training, evaluation, cross-validation, visualization through feature embedding, and ablation study with PyTorch and other Python libraries.
- Ran extensive experiments on three domain-adaptation benchmarks featuring more than 18GB of data, 600K images, 345 categories, and 6 domains, demonstrating state-of-the-art performance across standard and partial label settings.
- Published the work as **first author at CVPR 2021** and drafted the patent Statement of Claims for the method.

TECHNICAL SKILLS

Languages: Python (6 yrs.), C/C++ (5 yrs.), Go (2 yrs.), C# (2 yrs.), PL/SQL (2 yrs.), Java (2 yrs.), Rust (1 yr.)

Developer Tools: Visual Studio, VS Code, JetBrains IDEs, Vim, Git, Copilot, Claude Code, Codex, MCP, Agent Skills

Technologies/Frameworks: FastAPI, Gin, Docker Compose, Flutter, PyTorch, L^AT_EX, Linux, AWS, Kubernetes, Kafka

PROJECTS

Snek Compiler | *Rust, Cargo, NASM, Makefile* | <https://github.com/Fyy10/snek-compiler>

Apr. 2023 – Jun. 2023

- Built an x86_64 compiler for a Lisp-like language in Rust, including AST parsing, operators, bindings, and control flow.
- Implemented System V ABI-compatible functions, tuple-based data, and automatic memory management with a LISP 2 mark-compact garbage collector featuring root tracing and in-place heap compaction.

Surf Store | *Go, gRPC, Protobuf, Raft, SQLite* | <https://github.com/Fyy10/SurfStore>

Jan. 2023 – Mar. 2023

- Built a distributed file synchronization system in Go with gRPC/Protobuf, block-level key-value storage, and a local SQLite index that separated client metadata from remote file content.
- Implemented consistent hashing for balanced data placement and Raft consensus for a fault-tolerant metadata service.

EDUCATION

University of California, San Diego

Sep. 2022 – Mar. 2024

MS in Computer Science, **Cumulative GPA: 4.0/4.0**

La Jolla, California

University of Electronic Science and Technology of China

Sep. 2018 – Jun. 2022

BEng in Computer Science and Technology, **Cumulative GPA: 3.96/4.0**

Chengdu, China
