Summary

Backend-focused software engineer with 2+ years of experience owning production Go and Python services, authentication and API infrastructure, CI/CD, and manufacturing and warehouse integrations. I am the primary backend owner in a three-developer team. CVPR first author with an MS in Computer Science from UC San Diego.

Work Experience

Software Engineer **Apr. 2024 – Present**

Mitac Information Systems Corp Newark, California

- Lead backend modernization of manufacturing and warehouse systems used by 400+ employees across 14 production lines and 10+ warehouses. Designed Python/FastAPI services with approximately 100 endpoints.
- Architected MCore, a shared Go service used by all current backend services to access 4 production and 4 development Oracle instances, centralizing configurable connection pools, queries, batch execution, concurrent transaction control, retries, and graceful shutdown.
- Built a Go authentication service and Caddy API gateway securing hundreds of routes across 3 systems for 400+ users, with LDAP/AD login, JWT revocation, RBAC, ABAC, permission caching, and trusted identity propagation.
- Designed the state machine and integration APIs for automated warehouse inbound, outbound, and transfer workflows, coordinating 3 AGVs across approximately 4,000 storage locations with task prioritization, concurrency limits, and aisle-aware assignment.
- Partnered directly with major cloud infrastructure customers to define, document, and support B2B APIs for server/rack assembly data and work-order intake. Replaced per-serial lookups with optimized SN/date-range queries that retrieve two weeks of data in tens of seconds.
- Introduced Linux-based container deployments and GitLab CI/CD for backend services, automatically deploying development branches and tagged production releases with versioned rollback, Docker Compose recovery, and minimal manual intervention.
- Led TFS-to-GitLab and .NET 2.5/3.5-to-4.5 migrations for 2 production desktop systems. Adopted a managed Oracle driver to eliminate client installation requirements across approximately 100 PCs without breaking user workflows.

Deep Learning Research Assistant **Oct. 2019 – Jun. 2022**

UESTC Center for Future Media Chengdu, China

- Proposed the Partial Feature Selection and Alignment model, designed its architecture and loss objectives and implemented the PyTorch training and evaluation pipeline for multi-source domain adaptation.
- Led experimental design and co-authored the paper as **first author at CVPR 2021**. Ran extensive experiments on three domain-adaptation benchmarks featuring more than 18GB of data, 600K images, 345 categories, and 6 domains, demonstrating state-of-the-art performance across standard and partial label settings. Achieved average accuracy gain of 6.6% over MSDA baselines and 14.4% over PDA methods on the Digit-Five dataset.

Technical Skills

Languages: Go, Python, C#, PL/SQL, C/C++, Rust, Dart
Backend/Infrastructure: FastAPI, Gin, Go net/http, pytest, Go testing, Oracle, Docker Compose, Caddy, GitLab CI/CD, Linux, OKD, Argo CD, Harbor, Infrastructure as Code
Additional: Flutter, PyTorch, gRPC, Protocol Buffers, SQLite

Projects

SurfStore | *Go, gRPC, Protocol Buffers, Raft, SQLite* | github.com/Fyy10/SurfStore **Jan. 2023 – Mar. 2023**

- Built a distributed file synchronization system in Go with gRPC, block-level key-value storage, and a local SQLite metadata index.
- Decoupled metadata and content across servers, using consistent hashing for deterministic block placement and Raft consensus for fault-tolerant metadata replication.

Publications

Yangye Fu et al. *Partial Feature Selection and Alignment for Multi-Source Domain Adaptation.* **IEEE/CVF CVPR 2021**. Paper

Education

University of California, San Diego **Sep. 2022 – Mar. 2024**
MS in Computer Science, **Cumulative GPA: 4.0/4.0** La Jolla, California

University of Electronic Science and Technology of China **Sep. 2018 – Jun. 2022**
BEng in Computer Science and Technology, **Cumulative GPA: 3.96/4.0** Chengdu, China
